

Year 2 Science Home learning

w/c 15th June

What and who are scientists? What do scientists do? What does a scientist look like?

Today you are going to be a scientist and test the properties of different materials.

<https://www.bbc.co.uk/bitesize/clips/zxkc87h>

I have a problem!

I have a cat that often knocks over glasses of water left on the table in the kitchen. *I want to be able to mop up the water quickly, before it ruins the wood on the table and then drips on the floor, but I never know which paper towel to use. I have so many at home and it is quite confusing*

Which do you think will be the most absorbent?

Absorbency is a materials ability to soak up a liquid.

I predict.....

Can you design an investigation to test which would be the most absorbent?

You would have the following equipment:

kitchen paper, silver foil, wrapping paper, newspaper, card, pipettes or syringes, beakers of water, tape, timers.

..... investigation

My hypothesis (claim) is:

What I will do:

What I will need:

How I will record the results:

What did I discover?
