

## Home Learning Summer 2 Week 2 – Science

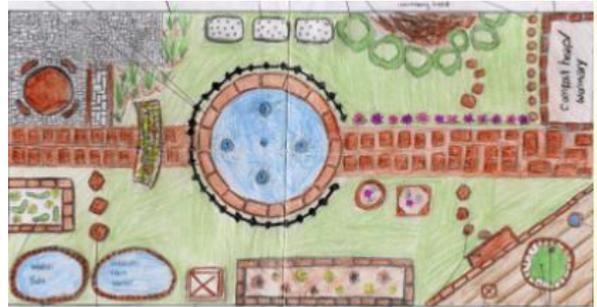

In science this half term we will continue to look at plants.

This week we will be getting outside to look at different kinds of plants. Take a trip to your garden or the park and explore the different kinds of plants that you see. Look closely at them. What different parts can you see? What do they look like? How are the plants similar or different to each other?

Watch this video to learn the names of some wild flowers you may find on your trip. <https://www.youtube.com/watch?v=L9ghMgHR8e0>

### Activity 1 – mapping

Draw a map of the garden or park that you visited. Make sure to label the different kinds of plants that you saw there.

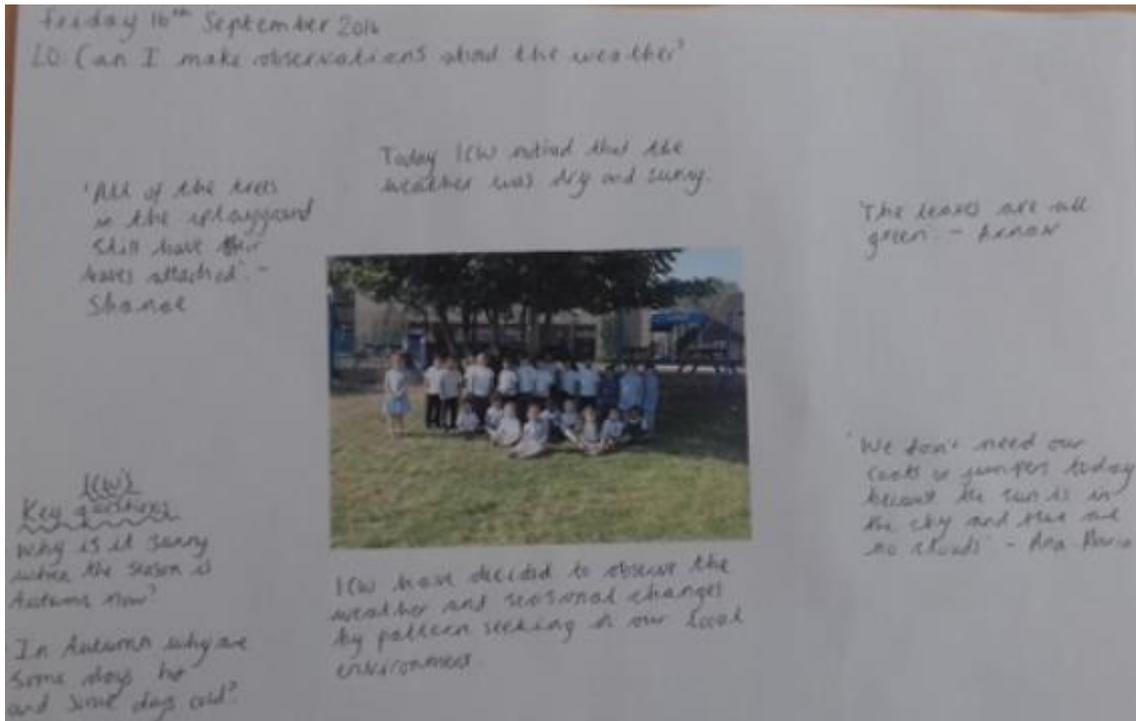

### Activity 2 – observations

Write some sentences about what you observed about the different plants.

### Activity 3 – questions

What questions do you have after looking at the plants? What do you want to find out more about? Write some questions that you want to find the answers to in this topic. Remember to start using a question word (What, Where, When, Why, How, Do) and end with a question mark (?).

### Activity 4 – planting

Plant some seeds this week and watch them grow. Broad beans are a good choice to grow at home. Watch them every day and see what you notice about the growing plant. Wrap the seed in some kitchen roll soaked in water and put it in a clear cup or glass. The kitchen roll will keep the seed from drying out and you'll be able to see the roots grow since there is no soil!

Keep a bean diary in your science home learning book to keep track of the changes over time. Write the date and draw a picture of what your bean plant looks like. Then write 1-2 sentences describing what the plant looks like or what has changed since your last diary entry.
